Ensures that systems and procedures are being followed to ensure the requirements of the clients are understood and are being achieved effectively.

**Key Accountabilities/Responsibilities/Competencies**

- Work on site on all active projects with a view to supporting and training our superintendents and field QC staff. Record these visits / audits so that they may be shared and followed up.
- Foster a culture of continuous improvement.
- Manage the QC field staff .
- Participate in the further development of the QA/QC program, with the aim to ensure that the quality requirements of the client are understood by the construction team and are being achieved at the field level.
- Participate in the review and approval of site pre-planning documents.
- Provide technical support and training for the field crews and office staff with respect to inspection techniques, acceptance criteria, inspection equipment and procedures.
- Participate in monthly NCR focus meetings with a view to having corrective actions implemented.
- Provide on-site QC support on major / complex events such as slipform structures.

**Qualifications**

- Must be proficient and have experience working with concrete.
- Must be knowledgeable with the principles of quality management systems.
- Well-developed communication and interpersonal skills with the ability to handle criticism and diffuse confrontational situations.
- Must maintain a strong technical knowledge of concrete.
- Pleasant demeanour with an ability to handle time-sensitive tasks.
- Must have an understanding of all processes of project development and execution, including perspective from clients, consultants, contractor, and subcontractors.
- Significant engineering and construction experience.
- B.Sc. in Engineering or C.E.T. and a background in quality management is preferred.
- Computer skills including MS Office.
- A good understanding of business principles associated with project development and execution, including financial, legal, and organizational aspects.
