This past year we have focused on numerous activities including investigating the possibility of developing a national Indigenous chapter. Other activities included partnering with Engineers Geoscientists Manitoba members from the University College of the North in an attempt to encourage more northern Indigenous people to pursue a degree in engineering, investigating the role IPIC and EGM can help play in advancing the recommendations of the Truth and Reconciliations Committee report and also to conduct outreach into the high schools.

Our committee is still pursuing volunteers, especially from the north and western portions of the province, to assist us in delivering projects and materials to northern communities.
