Reporting to the Chief Metallurgist, you will be responsible for providing technical expertise to process operations, establishing and tracking KPIs, and optimizing processes. Your responsibilities will include monitoring and troubleshooting of process operations, planning, continuously improving process operations, and communicating results. You will foster innovation and make recommendations to improve results and achieve goals. You will assist with coordination of activities, people and resources on projects to meet project objectives, timelines and budgets. You will leverage best practices, innovate, and collaborate in alignment with others in the mineral processing jurisdiction and within the company.

### Requirements of the position

- Bachelor's degree in chemical, metallurgical, or mineral process engineering
- A minimum of two years relevant work experience
- Equivalent combination of education and work experience considered
- Proficient and effective communication, problem solving, and interpersonal skills, including working in an integrated team environment with multiple projects and priorities
- Work a rotational schedule and commute to site by aircraft
- You must be eligible for registration with the Association of Professional Engineers and Geoscientists of Saskatchewan (APEGS)

### Assets:

- Experience in mineral processing and water treatment settings
- Experience and skills with modern data systems, including databases, PI Asset Framework, PI Vision, Power BI, Minitab, and common tools such as the MS Office suite.
- Experience in management of process control loops, including advanced process controls
- Experience with managing small projects, studies, data analysis, and interpretation
- Goal oriented, forward looking, industry aware, results focused, committed to safety.

Applicants will be considered for a level within the job progression, which is appropriate to their qualifications.
